

A2
cancel.

menu selection of programs, the set top terminal having microprocessor instructions for prompting generation of menus and comprising:

a receiver adapted to receive programs; and

a first hardware upgrade comprising:

an interface to the set top terminal for receiving and processing subscriber input;
and

a modem connected to the interface capable of communicating with one or more headends, wherein the set top terminal receives television program signals based on the subscriber input.

A3 24. (Amended) A system comprising:

a television program delivery system adapted to deliver television program signals; and

a set top terminal having microprocessor instructions for prompting generation of menus and comprising:

a receiver adapted to receive at least some of the television program signals; and
a hardware upgrade comprising:

an interface to the set top terminal for receiving and processing subscriber input; and

a modem connected to the interface capable of communicating with one or more headends, wherein the set top terminal receives the television program signals based on the subscriber input.

A4 27. (Amended) The system of claim 26 wherein a particular one of the one or more headends transmitting one or more of the programs to the terminal.

A5 30. (Amended) A television terminal having microprocessor instructions for prompting generation of menus, the television terminal comprising:

a television program receiver;

an interface to the television terminal for receiving and processing subscriber input;

a modem capable of communicating with one or more headends, wherein the receiver receives television program signals based on the subscriber input; and

an output connected to the receiver and the modem, wherein the output accepts the television program signals from the receiver and data signals from the modem.

A6 42. (Amended) A method for delivering television programs through a television program
